CONTENTS OF VOLUME 20

Number 1, July 1967

J. Feeney and F. W. Hemming. Nuclear Magnetic Resonance Spectrometry of Naturally Occurring Polyprenols . . . 1

L. I. Glebko, J. I. Ulkina, and V. E. Vaskovsky. Spectrophotometrical Method for Determination of Nitrogen in Biological Preparations Based on Thymol-Hypobromite Reaction . . 16

L. Ingram, M. P. Tombs, and A. Hurst. Mobility—Molecular Weight Relationships of Small Proteins and Peptides in Acrylamide-Gel Electrophoresis 24

P. L. Ipata. A Coupled Optical Enzyme Assay for 5′-Nucleotidase 30

W. F. Bon. Simultaneous Analysis of Different Specimens in the Ultracentrifuge 37

Raymond E. Hansen, Theodore T. Kalal, and Helmut Beinert. A Gas-Flow System for the Control of the Temperature of an Electron Paramagnetic Resonance Sample at Temperatures Between 80 and 273 Degrees Kelvin 40

J. I. Ohms, J. Zec, J. V. Benson, Jr., and J. A. Patterson. Column Chromatography of Neutral Sugars: Operating Characteristics and Performance of a Newly Available Anion-Exchange Resin 51

W. A. Khan, T. Baldwin, U. Brodbeck, and K. E. Ebner. A Simple Chemical Synthesis of α-D-Glucose-1,6-Diphosphate . 58

Jean Lust and Victor Richards. Influence of Buffers on the Phenol Extraction of Liver Microsomal Ribonucleic Acids . 65

B. P. Lisboa and R. F. Palmer. Application of Thin-Layer Chromatographic Techniques to the Separation of Δ^{16}-C_{19}-Steroids and Related Compounds 77

Herbert Schuel and Regina Schuel. Automated Determination of Protein in the Presence of Sucrose 86

E. Sulkowski and M. Laskowski, Sr. The Separation of Nucleotides and their Derivatives by Continuous Free-Flow Electrophoresis 94

Arthur Karmen. A Combination Membrane-Gas Detector for Monitoring Concentrations of Dissolved Volatiles . . . 102

C. R. McEwen. Tables for Estimating Sedimentation through Linear Concentration Gradients of Sucrose Solution . . . 114

A. Chrambach, R. A. Reisfeld, M. Wyckoff, and J. Zaccari. A Procedure for Rapid and Sensitive Staining of Protein Fractionated by Polyacrylamide Gel Electrophoresis . . . 150

B. C. Ray Sarkar and U. P. S. Chauhan. A New Method for Determining Micro Quantities of Calcium in Biological Materials 155
K. H. Haraguchi, J. C. Jansen, and B. V. Siegel. A Multiple-Wavelength Selector for a Continuous Spectrophotometric Column Monitoring System 167
D. N. Skilleter and R. G. O. Kekwick. An Improved Ion-Exchange Procedure for the Chromatography of the Metabolites of Mevalonate 171
George W. Rushizky and Warren W. Miller. Activation Analysis of Mono- and Oligonucleotides 181
Martin A. Rizack. Separation of Adenosine 3′,5′-Phosphate Derivatives on Thin Layers of ECTEOLA Cellulose . . . 192

Short Communications

Don M. Carlson. A Simple Quantitative Assay for *N*-Acetylgalactosaminitol 195
Gary J. Nelson and Robert A. Booth. Increasing the Sensitivity of Char Sprays for the Detection of Lipids on Thin-Layer Chromatograms by Viewing under Ultraviolet Light 198
I. Salasoo. Distribution of Rabbit Serum Proteins in Fractionation by the Cold Ethanol Method 200

Addendum 203

Number 2, August 1967

Howard Ko and Max E. Royer. A Submicromolar Assay for Nonpolar Acids in Plasma and Depot Fat 205
Carl Monder and Newell Sells. Influence of Acids on the Determination of Calcium and Magnesium by Atomic Absorption Spectrophotometry 215
B. Stavrić, W. J. Johnson, and A. Chartrand. Use of a Sensitive New Method for Determination of the Urinary-Excretion of Dichlorodiphenylacetic Acid (DDA) by Human Subjects . 224
D. J. Watson, E. B. Romanoff, J. Kato, and D. B. Bartosik. A Method for the Determination of Progesterone in Biological Specimens 233
Albert A. Dietz and Tina Lubrano. Separation and Quantitation of Lactic Dehydrogenase Isoenzymes by Disc Electrophoresis 246
Je. H. Kim, Basudev Shome, Ta-Hsiu Liao, and John G. Pierce. Analysis of Neutral Sugars by Gas-Liquid Chromatography

of Alditol Acetates: Application to Thyrotropic Hormone and Other Glycoproteins 258

Martha A. Ward, Timothy E. McCarthy, and Jonathan S. Nishimura. Gas-Liquid Chromatography and Derivatives of Several Amino Acids that Occur in the Actinomycins . . 275

W. S. Zaugg and R. J. Knox. Determination of Phosphate in Biological Materials and Reaction Mixtures by Atomic Absorption Spectrophotometry 282

Clinton A. Nerenberg, Dinesh C. Sharma, and Ralph I. Dorfman. An Automatic Device for Adding Solvents to Chromatography Tanks 294

Vivian E. Shih, Mary L. Efron, and Gerald L. Mechanic. Rapid Short Column Chromatography of Amino Acids. A Method for Blood and Urine Specimens in the Diagnosis and Treatment of Metabolic Disease 299

Ronald Bentley and Nancy Botlock. A Gas Chromatographic Method for Analysis of Anomeric Carbohydrates and for the Determination of Mutarotation Coefficients 312

Charles J. Rogers, Cecil W. Chambers, and Norman A. Clarke. Spectrophotofluorometric Determination of Nanogram Amounts of α,ϵ-Diaminopimelic Acid-A Bacterial Cell Wall Constituent 321

Mildred Van De Bogart and Helmut Beinert. Micro Methods for the Quantitative Determination of Iron and Copper in Biological Material 325

Arnold S. Bleiweis, Henry C. Reeves, and Samuel J. Ajl. Rapid Separation of Some Common Intermediates of Microbial Metabolism by Thin-Layer Chromatography . . . 335

Raymond F. Chen. Practical Aspects of the Calibration and Use of the Aminco-Bowman Spectrophotofluorometer . . . 339

Ronald D. Brown and Charles E. Holt. Rapid Separation of Thymine Dimer and Pyrimidines on Ion-Exchange Paper . 358

Short Communications

R. Brentani, M. Brentani, and I. Raw. Zone Sedimentation Analysis of RNA in Angle-Head Rotors 361

John Gorton Davis and Mary B. Siele. Ultrafilter for the Concentration of High Molecular Weight Solutes . . 363

James Winkelman and Gary Slater. Chemiluminescence of Liquid Scintillation Mixture Components 365

C. David Wise. The Fluorometric Determination of Brain Serotonin 369

Erratum 370

Charles L. Burger. Measurement of Nucleotide, Amino Acid, and DNA Contents of Tissues after Whole-Body X-Irradiation 373

P. Biely and Š. Bauer. Determination of Intracellular 2-Deoxy-D-glucose 6-Phosphate and Uridine Diphosphate-2-deoxy-D-glucose 387

J. Attal, S. M. Hendeles, and K. B. Eik-Nes. Determination of Free Estrone in Blood Plasma by Gas-Phase Chromatography with Electron Capture Detection 394

Volney Wallace. Rapid Automated Analysis Involving Liquid-Liquid Extraction: Atropine by a Prudhomme Method . . 411

L. A. Veiga and E. L. Chandelier. Detection and Differentiation of Sugars on Paper by *p*-Anisidine/Periodate Reaction . . 419

Bette L. Hamman and Malcolm M. Martin. Direct Spectrophotometric Quantitation of Steroid Chromatograms. 1. The Measurement of Corticosteroids 423

U Hla-Pe and Aung-Than-Batu. A New Colorimetric Method for the Determination of Formiminoglutamic Acid in Urine . 432

Wesley C. Starbuck, Charles M. Mauritzen, Carolyn McClimans, and Harris Busch. A Computer Program for the Calculation of Amino Acid Analysis Data 439

M. Rowland and S. Riegelman. The Use of Carbon Disulfide as a Solvent for the Silylation of Submicrogram Amounts of Carboxylic Acids 463

Paul W. Hathaway, Laszlo Jakoi, William G. Troyer, Jr., and Morton D. Bogdonoff. A Method for Semiautomatic Differential Analysis of Urinary Catecholamines 466

Gerald Goldstein. Ligand-Exchange Chromatography of Nucleotides, Nucleosides, and Nucleic Acid Bases 477

Claus Grunwald, Miguel Vendrell, and Bruce B. Stowe. Evaluation of Gas and Other Chromatographic Separations of Indolic Methyl Esters 484

Käthi Hunziker and Karl Schmid. A Brief Method for the Identification of the α_1-Acid Glycoprotein Variants . . . 495

Lewis D. Steginк. Microenzymic Method for the Quantitative Analysis of Acetyl Groups in Proteins and Peptides . . . 502

Volney Wallace. Correction for Cross-Contamination in Auto-Analyzer Analysis 517

Hannah E. Rosenthal. A Graphic Method for the Determination and Presentation of Binding Parameters in a Complex System 525

I. B. Rubin, A. D. Kelmers, and G. Goldstein. The Determination of Transfer Ribonucleic Acid by Aminoacylation. I. Leu-

U. Hla-Pe and Aung-Than-Batu. A New Colorimetric Method

cine and Phenylalanine Transfer Ribonucleic Acid from *E. coli* B 533

Short Communications

John G. Forte, Harold Helbock, and Paul Saltman. A Versatile Apparatus for Membrane Transport Studies . 545

B. M. Mitruka and M. Alexander. Ultrasensitive Detection of Certain Microbial Metabolites by Gas Chromatography 548

A. V. LeBouton. Electrophoretic Separation of Soluble Rat Liver Cell Proteins on Gelatinized Cellulose Acetate . 550

Warren Steck. On the Identification of Some Naturally Occurring Hydroxycinnamic Acid Derivatives . . . 553

Carel J. van Oss. The Hazards of Knotting Dialysis Bags . 556

INFORMATION FOR AUTHORS

Analytical Biochemistry will publish articles on qualitative and quantitative techniques based on chemical, physical, and biological principles; methods of preparation, purification, characterization, isolation, and separation of biological substances and related materials; and instrumentation.

Address. Manuscripts should be submitted to **Dr. Alvin Nason, Editor, McCollum-Pratt Institute, The Johns Hopkins University, Baltimore, Maryland 21218.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least two copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), and address to which proof should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Methods, Results, Discussion, Summary, Acknowledgments, and References.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 gm, 8 cm).

Figures should be mentioned consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at bottom of page containing table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts* (Vol. 55, 1961). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Bishop, N. I., *Biochim. Biophys. Acta* **27**, 205 (1958).
2. Cohen, S. S., *in* "The Chemical Basis of Heredity" (W. D. McElroy and B. Glass, eds.), p. 651. Johns Hopkins Press, Baltimore, Maryland, 1957.

Proofs. Galley proofs will be sent to the authors with reprint order forms. **Fifty reprints** of each article are provided free of charge.
